Product Description

The Notcher unique design produces a true 30 degree V-shaped cut in sheet metal. The high quality alloy steel jaw cuts cleanly, resulting in a finer notch edge. The alloy steel adds durability, and the black oxide finish resists rust, providing a long useful life. Compound-action gives reliable, consistent notching over repeated use, without slippage. Our hardened pivot bolts make the tool dependable over repetitive use. Comfortable vinyl grips are soil-resistant. Notcher is 8-1/2" long, with 3/4" notch, and with a cutting capacity of up to 22 gauge CR. Made in the USA.
