Product Description

Deburring Tools

Standard Duty Two-Blade Telescoping Tool

The smooth 360° swivel action of these blades allows them to rotate freely to follow the contours and edges of any workpiece. Store additional blades in the tools' handles. Handles are made of plastic and blades are high-speed steel, unless noted.

The pull-down locking collar on these tools makes changing blades a snap. *Telescoping tools* have adjustable blade holders that lock at various lengths and reach into holes up to 5" deep. *Nontelescoping tools* have blades that fit directly into the handle.
